**ATTACHMENT TO REISSUE APPLICATION DECLARATION**

The patent is partly invalid because Applicant claimed less than he had the right to claim in the patent. Specifically, the patent is currently directed to a golf club shaft for a golf club head. The shaft comprises at least one tubular section and a unitary insert attached to the at least one tubular section for regulating the flex point of the shaft. The insert is shorter than the tubular section and has a central section and a pair of couplers integrally formed on opposite ends of the central section. At least one of the couplers is attached to an end of the tubular section of the shaft and the central section extending axially outwardly away from the end of the tubular section. The insert is at least as rigid as the tubular section to which it is attached.

While Applicant and his representative appreciated the structure originally claimed in the present application, Applicant and his representative failed to appreciate and claim the significance of an insert secured at the distal end of the shaft for enhancing swing control, stiffness and flex control, shock absorption and vibration elimination or reduction.

That is, Applicant and his representative failed to appreciate the novelty and unobviousness of designing a golf shaft as disclosed in Figures 7 and 11.

Accordingly, Applicant submits the enclosed reissue application with new claims 42 to 51. The new claims define a golf club shaft having a distal end and a grip end. The shaft includes a tubular section having a first end located at the grip end of the golf club shaft and a second end positioned slightly short of the distal end of the golf club shaft. An insert is secured to the second end of the first member. The insert extends from the second end of the tubular section to the distal end of the golf club shaft and includes a first end securely coupled to the second end of the first member and a second end which is ultimately secured to a golf club head. As claimed in claim 42, the insert is formed from a vibration absorbing material which absorbs undesirable vibrations resulting from an individual striking a golf ball. With regard to claim 47, the insert is formed from a material controlling the stiffness at the distal end of the golf club shaft upon striking a golf ball to thereby stabilize a golf club head secured to the distal end of the golf club shaft.

New claims 42 to 51 are believed to fully define the patentable subject matter which was inadvertently and without deceptive intent, not included in the patent as originally filed.
